HW01 -- Speaking in Pseudocode  
2017-02-01

```
public String linearSearch(int[][] matrix, int search){
    int row = matrix.length-1;
    int column = 0;
    while (row > -1 && column < matrix[0].length){
        if (matrix[row][column] == search){
            return "row: " + row + " column: " + column;
        }
        else{
            if (matrix[row][column] > search){
                row--;
            }
            else{
                column++;
            }
        }
    }
    return "integer you are looking for is not within this matrix, please try again";
}
```

public static String  
linearSearch (int[][] matrix, int search)
